HEALTH TECH 2026

The Bengal Chamber of Commerce and Industry (BCC&i) is presenting 9th edition of HealthTech Summit with PwC India, as the Knowledge Partner. The theme, this year, is "Responsible Healthcare- Making Efficient with Good Governance".

Health Tech, this year, will bring together technology providers, healthcare institutions, consultants, academicians, startups, investors to deliver on responsible healthcare, security and privacy in healthcare, good governance and higher investments.

Indian healthcare sector has entered a new era of trust and technology. This landscape is no longer just 'evolving'; it is fundamentally being re-imagined. It has stepped into technological renaissance that prioritizes the well-being of the patient over anything. The recent heartbeat of this particular industry is defined by a daring new mandate: responsible healthcare.

The discussions will include:

The Summit will create platform for:

The Thought Paper on "Navigating Privacy and Protection in India's Healthcare Digital Frontier", by PwC India, will be released during the programme and a panel discussion will be featured on the topic.

OVERVIEW

Responsible Healthcare encompasses the idea of effectiveness, quality, equity and safety in the healthcare services and extends way beyond just treatment. It considers high-quality, ethical and accountable services that are accessible and affordable. The Indian healthcare sector has seen a revolutionary transformation in this era of digitization and so the idea of privacy and security is non-negotiable. Following the enforcement of the Digital Personal Data Protection (DPDP) Act in 2023 and the elaboration of the Ayushman Bharat Digital Mission (ABDM), the country has been able to build an architecture that can be defined as Security by Design. This helps to ensure that as millions of health records are digitized, the data remains with the patient's informed consent. This practice translates in promoting a culture of trust and ethical responsibility in the healthcare industry

Good governance is the framework that ensures health services are delivered in a transparent, accountable, and equitable manner, narrowing the bridge between a developing and a world-class healthcare system. It acts as a catalyst in transforming the sector towards more efficiency and also becoming more ethical, making it the global gold standard for "High-Tech, High-Touch" healthcare. Good governance also attracts global investment in the healthcare sector in India, creating investor confidence. The historic surge in private equity proves that this is not just passive capital but strategic catalyst. It creates a positive ripple effect for the economy, where the combination of capital efficiency and digital intelligence creates a virtuous cycle.
